

MINISTRY OF SCIENCE AND HIGHER EDUCATION OF THE REPUBLIC OF
KAZAKHSTAN

M.Auezov SOUTH KAZAKHSTAN UNIVERSITY

«APPROVED»

Chairman of the Board-Rector

D.Zh. Ahmed-Zaky

2026.

EDUCATIONAL PROGRAMME

7M01530 - "Computer science"

Registration number	7M01500001
Code and classification of the field of education	7M01 Pedagogical Sciences
Code and classification of training areas	7M015 Teacher training in natural science subjects
Group of educational programs	M012 Teacher training in computer science
Type of EP	Current
ISCE level	7
NQF level	2
SQF of education level	7
Language of learning	Kazakh, Russian
Typical duration of study	2 years
Form of study	Scientific and pedagogical
The complexity of the EP, not less	120 credits
Distinctive features of EP	-
University Partner (JEP)	-
University Partner (TDEP)	-
Social Partner (DE)	-

Drafters:

Name	Position	Sign
Zhaydakbayeva L.K.	c.p.s., Senior Lecturer Head. Department of "Informatics»	
Beisenova G. I.	c.p.s., Associate Professor, Department of "Computer Science"	
Sarkul N.O.	Master's student of the MEP-25-8 nc group	
Suleimenova L.A.	Candidate of Technical Sciences, Associate Professor, Head Department of "Informatics» South Kazakhstan Pedagogical University U.Zhanibekov University	
Utegenov M.K.	Director of the Higher College of New Technologies named after M.Utebaev	
Arynbekova A.S.	Director of the South Kazakhstan College of Humanities and Economics	
Kaikenova G.Zh .	The director of the Gymnasium No. 26 named after him. Zhanibayev	
Sauranbayev Zh.S.	Director of the specialized boarding school No. 2 with instruction in three languages	

The educational program has been updated taking into account the new model of inclusive education and agreed with the City department of employment and social protection.

Deputy Head of the Department of Employment and Social Protection of Shymkent K. Kaldykarayev

The EP was considered at a meeting of the Academic Quality Committee of the Natural Sciences Pedagogy or the Higher School, Minutes № 23 » 02 2026y.

Chairman of the Committee A.Z. Tursynbayev

The EP was considered and recommended for approval at Educational-methodical meeting of M. Auezov SKU

Minutes № 4 «27» 02 2026y.

Chairman of the UMS E.I. Imangalyev

The EP was approved by the decision of the Academic Council of the University
Minutes № 14 «26» 03 2026y.

1 CONCEPT OF THE EDUCATIONAL PROGRAM

University Mission	Generation of new competencies, training of a leader who translates research and entrepreneurial thinking and culture
University Values	• Openness—open to change, innovation and cooperation. • Creativity – generates ideas, develops them and turns them into values. • Academic freedom – free to choose, develop and act. • Partnership – creates trust and support in a relationship where everyone wins. • Social responsibility – ready to fulfill obligations, make decisions and be responsible for their results.
Graduate Model	• Deep subject knowledge, their application and continuous expansion in professional activity. • Information and digital literacy and mobility in rapidly changing conditions. • Research skills, creativity and emotional intelligence. • Entrepreneurship, independence and responsibility for their activities and well-being. • Global and national citizenship, tolerance to cultures and languages.
The Uniqueness of the educational program	• The program is aimed at training specialists in scientific and academic fields, capable of conducting independent research. • It develops creativity and critical thinking, communication skills, and the ability to work in a team to solve modern scientific problems. • The practical focus of the program is ensured through the use of project-based learning, real-world case studies in practical classes, and innovative teaching methods.
Academic Integrity and Ethics Policy	The university has taken measures to maintain academic integrity and academic freedom, protection from any type of intolerance and discrimination: • Rules of academic integrity (order No. 212 of October 10, 2022); • Anti-corruption standard (order No. 221 n/a dated 12/07/2021). • Code of Ethics (Order No. 212 of October 10, 2022)
Regulatory and legal framework for the development of EP	The university has taken measures to maintain academic integrity and academic freedom, protection from any type of intolerance and discrimination: • Rules of academic integrity (order No. 212 of October 10, 2022); • Anti-corruption standard (order No. 8 n/a dated 08/01/2025). • Code of Ethics (Order No. 212 of October 10, 2022)
Organization of the educational process	1. Law of the Republic of Kazakhstan “On Education”; 2. «Model Rules for the Activities of Organisations of Higher and Postgraduate Education», approved by order of the Ministry of Education and Science of the Republic of Kazakhstan dated October 30, 2018 No. 595; 3. Standard rules for admission to training in educational organizations implementing educational programs of higher and postgraduate education, approved by order of the Ministry of Education and Science of the Republic of Kazakhstan dated October 31, 2018 No. 600; 4. State mandatory standards for higher and postgraduate education, approved by order of the Ministry of Education and Science of July 20, 2022 No. 2; 5. Rules for organizing the educational process in credit technology of education, approved by order of the Ministry of Education and Science of the Republic of Kazakhstan dated April 20, 2011 No. 152;

	6. Qualification reference book for positions of managers, specialists and other employees, approved by order of the Minister of Labor and Social Protection of the Population of the Republic of Kazakhstan dated December 30, 2020 No. 553; 7. Methodological recommendations for introducing ECTS principles into the educational process and expanding academic freedom. Appendix to the order of the Minister of Science and Higher Education. of the Republic of Kazakhstan dated February 12, 2024 No. 57 8. Guidelines for the development of educational programs for higher and postgraduate education, Appendix 1 to the order of the Director of the National Center for the Development of Higher Education of the Ministry of Education and Science of the Republic of Kazakhstan dated May 4, 2023 No. 601 Н/К
Quality assurance of the Educational program	• Internal quality assurance system • Involvement of stakeholders in the development of the Educational Program and its evaluation • Systematic monitoring • Actualization of the content (updating)
Requirements for applicants	They are established in accordance with the Standard Rules for admission to training in educational organizations implementing educational programs of higher and postgraduate education by order of the Ministry of Education and Science of the Republic of Kazakhstan No. 600 dated October 31, 2018, with changes and additions dated June 2, 2023. No. 252
Conditions for the implementation of educational programs (EP) for persons with disabilities and special educational needs(SSN)	For students with SEN (special educational needs) and persons with disabilities (PSI), tactile PVC tiles, specially equipped toilets, a mnemonic diagram, and shower bars have been installed in educational buildings and student dormitories. Special parking spaces have been created. Crawler lift installed. There are desks for people with limited mobility (PLM), signs indicating the direction of movement, ramps. In the educational buildings (main building, building No. 8) there are 2 rooms with six working places adapted for users with disorders of the musculoskeletal system (DMS).For visually impaired users, the SARA™ CE Machine (2 pcs.) is available for scanning and reading books. The library website is adapted for the visually impaired. There is a special NVDA audio program with a service. The JIC website http://lib.ukgu.kz/ is open 24/7. An individual differentiated approach is provided for all types of classes and in the organization of the educational process.

2 Passport of the Educational program

Purpose of the EP	Preparation of competitive masters in computer science, ready to carry out professional activities in research and educational fields.
Tasks of the EP	- to provide conditions for the development of a high intellectual level of development, the acquisition of logical and critical thinking skills of scientific and organizational work in scientific and pedagogical activities; - Creating conditions for the formation of in-demand knowledge and skills, a conscious attitude towards improving the well-being of the population and protecting the planet in the context of the SDGs; - development of the ability to use system theoretical and practical knowledge on the methodology of teaching mathematics and computer science in professional activities in solving scientific, managerial and educational tasks and making operational decisions in problem situations; - development of self-service skills to ensure the possibility of rapid employment in the specialty or continuing education in the doctoral program and ensure continuous professional development of professional activities; - formation of graduates ' competitiveness in the field of education, training of highly qualified and consistently popular undergraduates in scientific and pedagogical areas for the domestic and international labor market.
Harmonization of EP	• 7th level of the National Qualifications Framework of the Republic of Kazakhstan; • Dublin descriptors of the 7th level of qualification; • 2 cycle of a Framework for Qualification of the European Higher Education Area); • 7 th Level of European Qualification Framework for Life long Learning).
Connection of the EP with the professional sphere	The Professional Standard "Teacher" was approved by Order No. 591 of the Minister of Science and Higher Education of the Republic of Kazakhstan dated November 20, 2023. The professional standard for teachers in educational organizations was approved by Order of the Minister of Education of the Republic of Kazakhstan dated February 24, 2025, No. 31.
Name of the degree awarded	After successful completion of this educational program, the graduate is awarded a Master of Pedagogical Sciences degree in the educational program "7M01530 – Computer Science".
List of qualifications and positions	Masters of educational program 7M01530 – " Computer Science " may hold positions of university lecturer, research teacher, researcher in (research institutions, design and design organizations) in accordance with the qualification requirements of the Qualification Directory of positions of managers, specialists and other employees., approved by the Order of the Minister of Labor and Social Protection of the Republic of Kazakhstan dated May 21, 2012 No. 201-p-m and the Order of the Minister of Education and Science of the Republic of Kazakhstan dated June 9, 2011 No. 241 on amendments and additions to the Order of the Minister of Education and Science of the Republic of Kazakhstan dated July 13, No. 338, 2009 "Approval of standard qualification characteristics of positions of teaching staff and their equivalents" and according to the qualification directory of officials by Order No. 512 dated December 27, 2013.
Field of	Field of professional activity:

professional activity	- education; - research in computer science; - Research in the field of methods of teaching computer science; - Research in the field of information and communication technologies.
Objects of professional activity	Objects of professional activity of graduates: - educational organizations (universities, educational institutions); - state educational bodies; - centers of educational services; - training and research centers; - various forms of ownership that use the methods of computer science in their work. - research institutions and centers for informatization of education; - organization of educational systems of various forms of ownership, using computer technology in their work.
Subjects of professional activity	- A system of theoretical knowledge; - Theoretical and methodological bases of scientific research in pedagogy; - Methodology of research in the field of information education; - A system of methods for implementing research results in practical training; - Mechanisms for commercialization of research results; - a system of practical skills for the development of scientific and methodological complexes, author's courses; - system of higher education pedagogy; - systems of educational psychology; - pedagogical management system; - development of educational and methodical materials; - application of norms, rules, forms, methods and tools of international cooperation in the professional sphere; - Methods of teaching computer science in secondary and special educational institutions; - The system of research of the educational process and its value-oriented orientations, content, methods, forms and results; - Research system in the field of computer science, applied mathematics, pedagogy, psychology and teaching methods; - Innovation and information-analytical services; - Technological process of design, implementation and maintenance of software, mathematical, information software.
Types of professional activity	- education; - training; - management; - research and development.
Learning outcomes	LO1 Demonstrate knowledge of a foreign language in interpersonal communication, professional activity, writing scientific articles. LO2 To analyze the main ideological and methodological problems, including interdisciplinary ones, arising in science at the present stage of its development, to evaluate various facts and phenomena based on the provisions and categories of the philosophy of science. LO3 - To evaluate the development and effective use of personnel in the organization, to possess socio-psychological technologies for managing mass behavior. LO4 - To develop educational and methodological complexes of disciplines, taking into account the integration of education, science and

	innovation. LO5 - Implement and apply AI tools to solve specific tasks in their pedagogical and teaching-methodical activities. LO6 - To develop the content of educational robotics courses, technologies for different levels of education, demonstrating the skills of designing and programming robots, developing mobile applications. LO7 - Develop applications that interact with objects through virtual reality based on 3D modeling. LO8 - To develop electronic educational publications and design using information technology, Internet resources, and telecommunication means. LO9 - To design security systems using modern information security software and hardware. LO10 - To participate in research work using the methodology of scientific research and obtain new scientific, applied results as part of an independent and scientific team..
--	--

3 Competencies of a graduate of the EP

GENERAL COMPETENCIES (SOFTSKILLS). Behavioral skills and personal qualities	
GC 1. Competence in managing one's literacy	GC 1.1. Strive for professional and personal growth throughout life. GC 1. 2. Constantly update own knowledge within the chosen trajectory and in an interdisciplinary environment, carry out further learning with a high degree of independence and self-regulation. GC 1. 3. To be capable of reflection, an objective assessment of one's achievements, an awareness of the need to form new competencies and continue education in doctoral studies.
GC 2. Language competence	GC 2.1. The ability of possessing a sufficient level of communication in the professional field in the state, Russian and foreign languages for negotiating and business correspondence. GC 2.2. The ability of mastering the skills of mediation and intercultural understanding.
GC 3. Mathematical competence and competence in the field of science	GC 3.1. The ability to interpret the methods of mathematical analysis and modeling for solving applied problems in the field of study. GC 3.2. The ability to plan the setting of scientific experiments, integrate and implement the results of scientific research in the professional field. GC 3.3. The ability to analyze and comprehend modern methods of pedagogical and psychological science and apply them in pedagogical activity.
GC 4. Digital competence, technological literacy	GC 4.1. The ability to confidently use modern information and digital technologies, artificial intelligence systems for work, leisure and communications. GC 4.2. Proficiency in the use, recovery, evaluation, storage, production, presentation and exchange of information in a wide range of digital devices. GC 4.3. Ability to confidently use global information resources and apply technological literacy in research and computational and analytical activities.
GC 5. Personal, social and educational competencies	GC 5.1. Possession of the norms of business ethics, social and ethical values and focus on them in professional activities. GC 5.2. Formation of a personality capable of mobility in the modern world, critical thinking and physical self-improvement. GC 5.3. Ability to work in a team, correctly, clearly and reasonably defend one's position during discussions and make decisions of a professional nature. GC 5.4. Ability to adequately navigate in various social spheres of activity and in conditions of uncertainty. GC 5.5. Ability to find compromises, correlate own opinion with the opinion of the team.
GC 6. Entrepreneurial competence	GC 6.1. The manifestation of leadership qualities and the ability to have a positive impact on others, to lead a team. GC 6.2. The ability to create conditions for the development of creative and entrepreneurial skills of the team. GC 6.3. The ability to work in a mode of uncertainty and rapidly changing task conditions, make decisions, respond to changing working conditions, allocate resources and manage your time. GC 6.4. Ability to work with consumer needs.
GC 7. Cultural awareness	GC 7.1. The ability to show worldview, civil and moral positions.

and self-expression	GC 7.2. The ability to be tolerant of the traditions and culture of the peoples of the world, to have high spiritual qualities.
PROFESSIONAL COMPETENCIES (HARDSKILLS).	
PC1 scientific research	PC1.1 The ability to creatively use knowledge of fundamental and applied sections of biology in scientific and technological activities using the latest domestic and foreign experience.
PC2 scientific and innovative	PC2.1 The ability to show professional values: professionalism; innovation; creativity; meritocracy; integrity. PC2.2 The ability to apply the methodological foundations of design, implementation of field and laboratory, biological, physiological and medical research, use modern equipment, computer systems in accordance with the direction of the master's program.
PC3 organizational and managerial	PC3.1. Ability to plan and organize the educational process • to develop and implement educational programs, working curricula and classes; • to determine the goals, objectives and results of training; • to organize classroom, extracurricular, research and project activities of students. PC3.2. To organize scientific seminars and conferences; the ability to use the skills of preparation and design of scientific and technical documentation, scientific reports, reports and articles.
PC4 pedagogical and educational	PC4.1 The Ability to organize and conduct lectures, seminars, and practical classes taking into account the principles of student-centered learning and assessment, and to develop teaching and learning materials for the subjects taught, taking into account the integration of education, science, and innovation. PC4.2 Possess the skills and abilities to design and implement a holistic pedagogical process, be capable of positive thinking, be familiar with the system of national values, be committed to ethical values, and be inclined towards humanism and optimism.
PC5 innovation and design	PC5.1. The ability to use innovative solutions in the development of new technologies, the ability to assess innovative business risks in the implementation of new solutions in the field of technology development for various fields of activity; the ability to develop plans and programs for the organization of innovative activities of research teams.

4 Matrix of the influence of modules and disciplines on the formation of learning outcomes and information on labor intensity

Module	Cycle	Component	Name of the discipline	Brief description of the discipline	Quantity loans	The formed educational outcomes (codes)									
						RO1	RO2	RO3	RO4	RO5	RO6	RO7	RO8	RO9	RO10
Module of Scientific and Pedagogical Training	BD	HsC	History and Philosophy of Science	Purpose: the acquisition of knowledge by students, the development of skills necessary for the successful implementation of research activities on the basis of the philosophical and methodological culture of scientific knowledge, including ideas about the ways of organization and functioning of science, the general laws of its development, rational methods and norms for achieving knowledge, socio-cultural conditionality of scientific and technical creativity. Content: History and philosophy of pedagogical sciences. New European science in culture and civilization, the emergence of science, its historical dynamics, the structure of scientific knowledge, philosophical problems of a specific sciences. Communication technologies of the XXI century in the	4		✓								

				field of intercultural communication. Understand and integrate philosophical problems of the development of modern global civilization, modern topical methodological and philosophical problems of the pedagogy and linguistics.											
	BD	HsC	Foreign Language (Professional)	Purpose: further development of foreign language communicative competence (speech, language, socio-cultural, compensatory, educational and cognitive), the development of professional skills in translating texts of professional subjects from a foreign language into Kazakh, the formation of the ability to analyze scientific texts in the specialty. Content: Basic concepts and terms of mathematics and informatics. The content of the mathematics and computer science course in English. Methods of abstracting and translating literature in the specialty. Analysis of texts in English. Examples of the use of English in professional activities. Levels B2,C1 are presented in the form of a pragmatic professional orientation for professional and academic purposes at an advanced level: scientific information base, interpretation of scientific information, argumentation, beliefs, scientific polemics, academic	4	✓									

				writing. The use of innovative methods and technologies, and the involvement of modern means (Internet resources). Demonstration of knowledge of language material in any related discipline											
	BD	HsC	Psychology of Management	Purpose: formation of knowledge about the psychological content and structure of management activities, psychological characteristics of the personality of the head and psychological patterns of joint activity of people to achieve organizational goals, formation of practical skills of psychological support of management activities in various fields of education. Content: Management psychology as a field of scientific knowledge. Basic concepts and laws in management psychology. The main methods of psychological influence. The role of a psychologist in the organization and system of management relations. Features of conducting psychological research in organizations of various forms of ownership. The head as a subject of management activity. Leadership and leadership. Leadership style. Psychological support of management activities. Structural organization of management activities. Psychological management methods.	3			✓							

				Psychology of business relations. Psychological conditions of effective psychological interaction. Management of organizational conflicts.											
	BD	HsC	Pedagogy and Psychology of Higher School	The purpose of the course is to develop undergraduates' skills and abilities to effectively organize professional and pedagogical activities at a university based on modern psychological and pedagogical knowledge Course content: Modern paradigms of higher education. History, trends and strategies of higher education development in Kazakhstan. The subject, tasks, and categories of higher school pedagogy and psychology. Methodological foundations of higher school pedagogy and psychology. Professional competence of a university teacher. The communicative competencies of a university teacher. Higher school didactics. Psychological features of student age. The university learning process and its patterns. The content of education at the university. Forms of organization of the educational process at the university. Technologies of organization and implementation of the educational process at the university. Features of the credit training system. Methods and	5				✓						

				methods of teaching. The relevance and objectives of inclusive education. Psychological and pedagogical aspects of teaching students with special educational needs. Creating a psychologically supportive educational environment for inclusive education at universities.											
Methodical Fundamentals of Teaching	BD	HsC	Automating Software Development Using Artificial Intelligence	Purpose: To develop master's students' theoretical knowledge and practical skills in applying artificial intelligence methods and technologies to automate the processes of software design, development, testing, and maintenance. Content: Application of artificial intelligence in software development. Use of artificial intelligence in mobile application development. Artificial intelligence tools for software development. Modern approaches and technologies for applying artificial intelligence. Optimization of software systems and management of DevOps processes using artificial intelligence. Application of artificial intelligence in management systems, Continuous Integration (CI), and Continuous Delivery (CD) processes. Overview of the software development life cycle (SDLC) and opportunities for its automation. Automation of routine software development tasks using	5					✓					

				artificial intelligence. Automation of software development processes and the importance of analytics in improving software quality. Machine learning and artificial intelligence as the foundation of modern intelligent software systems.											
	BD	HsC	Pedagogical Practice	The relevance and objectives of inclusive education. Psychological and pedagogical aspects of teaching students with special educational needs. Creating a psychologically supportive educational environment for inclusive education at universities. Knowledge and understanding of the methodological foundations of modern education, the dialectical connection of pedagogical theory and school practice. To be able to present their new scientific results in the form of well-founded conclusions, to draw up the results of work in the form of reports, to draw up the research results in the form of articles, reports, to analyze the essence of the main modern methods and technologies of school education	4					✓					
Theoretical problems of computer science	PD	EC	Informatization of Education and Learning Problems	Purpose: formation of basic concepts of informatization of education among undergraduates, identification of the main learning problems and finding optimal solutions to various learning problems. Content: Computer science and	4				✓						

				education. The main directions of using ICT in teaching and education management. Methods of using ICT in teaching. Informatization of education as a direction of scientific research and training of teaching staff. Multimedia technology. Computer software and methodological support. Informational educational environment. Information culture of teachers. The concept of "information culture". Psychological and pedagogical foundations of informatization of education. The influence of informatization on the methodological system of education. Pedagogical possibilities of a modern computer.												
	PD	EC	Innovative Processes in Education	Purpose: formation of a system of general cultural and professional pedagogical competencies among undergraduates when mastering educational methods and activities related to innovative processes in modern education. Content: Pedagogical innovations in education. Innovation processes as a modern educational phenomenon. Innovative processes in education management. Innovative educational processes in secondary schools. Innovative processes in professional and pedagogical education. Innovative	4				✓							

				teaching methods. Interactive methods. Virtual reality technologies. Artificial intelligence in education. Blended learning. Project-based training. Learning through research methods. Cloud computing training.												
	PD	EC	Information Security and Protection in Information Systems	Purpose: undergraduates study the theoretical foundations and methods of information protection, the mathematical structure of secret systems, consideration of the mathematical representation of information, methods for analyzing information characteristics and redundancy of language systems, the theoretical foundations of correcting and restoring information characteristics of arbitrary texts, the creation of information protection systems, the development of basic methods and means of information protection. Content: Principles of information security. Information protection. Information security. Analysis of the software and hardware platform of information systems. Security models of information systems. Examples of practical implementation of protection and security systems. The main characteristics of a secure information system. Methodology of information security reliability. Information	6										✓	

				protection measure. Optimal management of protection processes. Evaluation of the protection system. Computer system security.											
	PD	EC	Data Protection in Computer Networks	Purpose: training of undergraduates in the main types and methods of information protection and mastering the ability to design information security systems, possess modern software and hardware information security tools. Content: Common information security issues. The State information security system. Security threats. Theoretical foundations of information system protection methods. Methods of protection of metering devices. Fundamentals of cryptography. Architecture of secure economic systems. Algorithms for binding software to the hardware environment. Security algorithms in computer networks.	6									✓	
	BD	EC	Principles of Virtual and Augmented Reality	Purpose: formation of undergraduates' knowledge and skills in the field of virtual and augmented reality applications within the framework of digital technologies. Contents: Theoretical foundations of virtual and augmented reality technologies. The concept of augmented and virtual reality technologies.	5							✓			

				Opportunities, threats, and recommendations of virtual reality technologies. Visualization and interaction devices for immersive environments. Augmented reality applications. Virtual reality applications. High-performance virtual and augmented reality applications. Virtual reality technologies in education. The current state of the use of augmented and virtual reality in education. Methodological recommendations on the use of augmented and virtual reality in the educational process.												
	BD	EC	SMART Education	Purpose: to increase the level of professional competencies of future teachers in the implementation of SMART learning in the educational process in order to personalize and optimize learning outcomes and instill skills in the application of modern teaching methods. Content: SMART-educational technology, goals and objectives. The role of SMART technologies in the modern educational process. SMART is an educational methodology. The concept of "Smart education". The meanings of Smart concepts. The experience of using Smart technologies in the educational process. The	5							✓				

				experience of using SMART technologies in the process of teaching the subject "Computer Science". The use of SMART learning in the educational process. Mobile learning. Smart textbook and Smart teacher. Smart tutorials. Modern problems of Smart technologies. The impact of Smart technologies on education and society. Smart technologies in higher education. Smart society.											
	PD		Research Practice	To know and understand the definition of an object, the patterns of development of research discipline. Justification of the relevance of the chosen topic of the dissertation, a description of the current state of the problem under study, the selection of the main literature used as the basis of the theoretical basis of the study, the collection of specific materials for the dissertation. Formation of conclusions, modeling, processing and interpretation of the results.	6										✓
Information and Communication Technology	BD	EC	Data Science and Intelligent Analysis	Purpose: To develop undergraduates' theoretical knowledge and practical skills in the field of collecting, storing, processing, analyzing and intelligently extracting knowledge from large amounts of data, as well as mastering modern methods of machine learning and data mining to solve scientific,	4									✓	

es				educational and applied problems. The goal corresponds to the learning outcomes of the educational program related to the use of big data analysis methods and modern information technologies in education and scientific research. Contents: An introduction to data Science. Data lifecycle and data preparation for analysis. Methods of data collection, purification, and transformation. Research data analysis. Statistical methods of data analysis. Data mining. Classification and regression. Cluster analysis. Associative rules and the search for patterns. Methods for reducing the dimension of data. Machine learning: learning with and without a teacher. Evaluation of model quality and validation of results. Big data analysis. Data visualization and presentation of results.											
	BD	EC	Artificial Intelligence and Machine Learning Technologies	Purpose: Formation of undergraduates' theoretical knowledge and practical skills in the field of artificial intelligence and machine learning technologies, mastering modern data analysis algorithms, developing intelligent systems and machine learning models for solving scientific, educational and applied problems. The purpose of the discipline corresponds to	4									✓	

			the learning outcomes of the educational program related to the use of artificial intelligence technologies, data mining and modern information technologies in education and scientific research. Content: An introduction to artificial intelligence. The main directions and areas of application of artificial intelligence. The history of AI development and current trends. Knowledge representation and intelligent systems. Search for solutions and methods of reasoning. Fundamentals of machine learning. Classification and regression algorithms. Decision trees and ensemble methods. The method of support vectors. Artificial neural networks. Deep learning. Convolutional and recurrent neural networks. Natural language processing. Evaluation and validation of machine learning models. Practical application of artificial intelligence and machine learning in education, scientific research and information systems.												
	BD	EC	Interdisciplinary STEM Approaches in Education	Purpose: Formation of undergraduates' theoretical knowledge about the concept of STEM education, mastering modern approaches to the integration of science, technology, engineering and	5					✓					

			mathematics in the educational process, as well as developing practical skills in designing and implementing interdisciplinary STEM projects. The purpose of the discipline corresponds to the learning outcomes of the educational program related to the use of innovative pedagogical technologies, digital tools and STEM approaches in educational and research activities. Content: Theoretical foundations of STEM education. The history of the formation and development of the STEM approach. Principles of interdisciplinary integration in STEM education. The relationship between science, technology, engineering and mathematics. Models and schemes of STEM education. Project and research training. Development of engineering thinking and design thinking. Development and management of STEM projects. Robotics and digital technologies in education. Fundamentals of programming and modeling. Organization of experimental and practical activities in the STEM environment. Assessment methods in STEM education. Formation of STEM competencies. Innovative educational technologies. The application of STEM education in the system of general and

				higher education.											
	BD	EC	Digital STEM Ecosystem	Purpose: Formation of undergraduates' theoretical knowledge about the STEM digital ecosystem, development of skills in the effective use of digital technologies in the STEM environment, as well as the formation of competencies in the design and implementation of innovative digital solutions in educational and research activities. The purpose of the discipline corresponds to the learning outcomes of the educational program related to digital transformation, STEM education technologies and the use of modern information and communication tools. Content: The concept and structure of the digital ecosystem of STEM. Digital transformation and digitalization processes of education. Digital platforms and services in STEM education. Cloud technologies and educational resources. Virtual and augmented reality technologies. The Internet of Things in a STEM environment. Robotics and automation systems. Data collection, processing, and analysis tools. The role of artificial intelligence and machine learning technologies in STEM education. Development of digital educational content. Digital STEM project	5						✓				

				management tools. Cybersecurity and data protection issues. The importance of digital technologies in the formation of STEM competencies. Application of the digital ecosystem of STEM in education and scientific research.											
Pedagogical basis of computer science	PD	EC	Educational Software Evaluation and Design	Purpose: ability to work with raster and vector graphics programs, creation of computer graphics and design elements, formation of editing skills. Content: Categories of educational software. Evaluation of educational software in four categories of points. Working with software. Assessment and testing in a virtual environment. Software products for computer design. Trends in the development of computer design.	5								✓		
	PD	EC	Development and Application of Educational Electronic Publications and Internet Resources	Purpose: be able to use electronic educational publications and Internet resources, know how to develop electronic educational publications, the use of telecommunications in education, know the methods of using information technology in education. Content: Fundamentals and specifics of electronic educational publications and resources. Ways to create electronic educational publications about the state program of informatization of education. Technical base and basic means of informatization of	5								✓		

				education. Multimedia technologies. Computer software and methodological support. Informational educational environment. The use of telecommunication facilities for educational purposes. Pedagogical possibilities of a modern computer.												
	PD	EC	Methodological Training of Teacher of Informatics in High School	Purpose: designing the educational process in computer science using modern technologies for undergraduates; implementation of the pedagogical process in various age groups and various types of educational institutions; expansion and deepening of applied knowledge in computer science using the latest scientific achievements. Content: The goals of computer science education. Didactics and principles of teaching computer science. The content of school education in computer science. Methods and organizational forms of computer science education. Technical and software tools for teaching computer science. Control and assessment of computer science knowledge. Substantive characteristics of computer science curricula, textbooks and teaching aids. Methodological features of teaching the basics of algorithmization and programming. Methods of teaching hardware and	6				✓							

				system software. Methods of teaching information-related problems. Teaching methods for text and image editors. Methods of teaching spreadsheet and database management systems. Methods of teaching information and communication technologies.												
	PD	EC	Methodical System of Teaching Informatics	Purpose: formation of undergraduates' knowledge about the system of education in the field of computer science, the main components of professional activity in computer science and examples of its implementation. Content: Methods of teaching computer science. Computer science as a science and academic discipline. The role and place of computer science education in modern society. The structure of the subject area of computer science. The subject of computer science teaching methodology. The initial goals and objectives of the discipline "Computer Science". Analysis of curricula and textbooks of the school computer science course. The content and structure of school education in computer science. 6 Strategies, teaching methods and artificial intelligence, monitoring and assessment

Learning strategies	Student-centered learning: The student is the center of teaching/learning and an active participant in the learning and decision-making process. Practice-oriented training: orientation to the development of practical skills.
Teaching methods	Conducting lectures, seminars, various types of practices with: • the use of innovative technologies; • problem-based learning; • case study; • work in a group and creative groups; • discussions and dialogues, intellectual games, olympiads, quizzes; • reflection methods, projects, benchmarking; • Bloom's taxonomies; • presentations; • * rational and creative use of information sources; • * multimedia training programs; • * electronic textbooks; • * digital resources. • * machine learning methods Organization of independent work of students, individual consultations.
Monitoring and evaluation of the achievability of learning outcomes	Current control on each topic of the discipline, control of knowledge in classroom and extracurricular classes (according to syllabus). Assessment forms: • survey in the classroom; • testing on the topics of the discipline; • control works; • protection of independent work;

	• discussions; • trainings; • colloquiums; • abstract, etc . Boundary control at least twice during one academic period within the framework of one academic discipline. Intermediate certification is carried out in accordance with the working curriculum, academic calendar. Forms of conducting: • exam in the form of testing; • oral examination; • written exam; • combined exam; • project protection; • protection of practice reports. Final state certification.
--	--

7 Educational and resource support for EP

Information Resource Center	The structure of the Educational Information Center includes 6 subscriptions, 16 reading rooms, 2 electronic resource centers (ERC). The basis of the network infrastructure of the Educational and Information Center is 180 computers with Internet access, 110 workstations, 6 interactive whiteboards, 2 video doubles, 1 video conferencing system, 3 A-4 format scanners, JIC software - AIBS "IRBIS-64" under MS Windows (basic set of 6 modules), stand-alone server for uninterrupted operation in the IRBIS system. The library fund is reflected in the electronic catalog available to users on the site http://lib.ukgu.kz on-line 24 hours 7 days a week. Thematic databases of their own generation: "Almamater", "Proceedings of SKSU scientists", "Electronic archive" have been created. Online access from any device 24/7 via the external link http://articles.ukgu.kz/ru/pps. Catalogs are processed electronically. EC consists of 9 databases: "Books", "Articles", "Periodicals", "Proceedings of the teaching staff of SKSU", "Rare Books", "Electronic Fund", "SKGU in Print", "Readers" and "SKU". The EIC provides its users with 3 options for accessing its own electronic information resources: from the "Electronic Catalog" terminals in the catalog hall and in the EIC subdivisions; through the information network of the university for faculties and departments; remotely on the library website http://lib.ukgu.kz/. Open access to international and republican resources: "SpringerLink", "Polpred", "Web of Science", "EBSCO", "Epigraph", to electronic versions of scientific journals in the public domain, "Zan", "RMEB", "Adebiet", Digital library "Aknurpress", "Smart-kitar", "Kitar.kz", etc. For people with special needs and disabilities, the library website has been adapted to the work of visually impaired users
Material and technical base	The material and technical base of the Department of Informatics includes the following classrooms and computer classes: - there are 3 computer classes for laboratory work, one of them with

	an interactive whiteboard; - lecture halls; - STEM center. Practice bases for undergraduates: 1. South Kazakhstan State Pedagogical University. 2. M.Utebayev Higher College of New Technologies 3.KazTilDamu LLP

AGREEMENT SHEET

by Education Program code 7M01530 - «Computer science»

Director of the Department of
Academic Affairs and Quality
of the Educational Proces

A.S. Naukenova

Director of DASc

Nazarbek U.B.

REVIEW
on the educational program
«7M01530 - Computer Science»
developed in M. Auezov SKU, Shymkent

1. Brief description of the enterprise and its business profile

The general characteristics of the educational program are presented on the university's official website and include the following information: the graduate's qualification, the form and duration of study, a brief description of the field and activities of the graduates, a complete list of key and professional competencies that the graduate should possess as a result of completing the educational program, as well as the area of professional activity that the graduate is preparing for, and a list of professional tasks that the graduate should be able to perform in accordance with the types of professional activity.

2. The relevance and demand for EP

Training of specialists in the educational program «7M01530-Computer Science» is very relevant from the point of view of further development of the field of information and communication technologies within the framework of the program "Digital Kazakhstan". Applying theoretical knowledge in solving mathematical and computer applied problems and professional activities, competently solving professional problems using modern computer systems, successfully carrying out scientific and pedagogical activities using effective teaching methods. Conducts monitoring to improve knowledge in the field of applied mathematics, mathematical modeling and system programming, mathematical economics, mathematics, will conduct research on mathematical modeling and computer technology.

3. Learning outcomes and competencies, their relationship with the demands of the labor market

The learning outcomes and competencies embedded in the EP, the theoretical knowledge, practical skills and professional skills provided fully meet the modern qualification requirements for specialized specialists of the master's qualification.

4. Availability of components that develop practical skills

Academic disciplines of educational program of basic and specialized training provide the formation of the necessary practical skills of a specialist with fundamental knowledge in mathematics, possessing computer methods of collecting, storing and processing information used in his professional activities, able to assess the perspective of the methods used to solve tasks, competitive in the domestic and international labor markets.

5. The Contents: of the educational program (modules, disciplines)

The proposed educational program contains all the necessary elements for the effective organization of the educational process – regulates the goals, expected results, content, conditions and technologies for the implementation of the educational process, assessment of the quality of training a specialist with a master's degree. It includes a curriculum, work programs of training courses, modules and disciplines, related materials: programs of pedagogical, research practice, academic calendar, educational and methodological complexes of disciplines.

The content of the curriculum fully corresponds to the direction of training specialists, is thought out and competently equipped with content. The academic disciplines included in the plan cover the entire range of topical issues and problems in the field of training, are fully capable of forming the necessary specialized knowledge, skills and abilities in the field of information technology.

The distribution of disciplines by academic periods is rationally and logically verified. All types of educational activities are provided for the preparation of highly qualified specialists with the skills of research work - theoretical training, pedagogical and research practice, writing and defending a dissertation. The planned volume and time resource for academic disciplines and types of training meet the qualification requirements for the level of graduates.

In accordance with the credit technology of education, the curriculum includes mandatory academic disciplines, as well as disciplines of the university component and an optional component. Compulsory disciplines provide the formation of general and professional competencies. The disciplines of the university component and the component of choice expand and deepen the training of students, contribute to obtaining additional competencies, knowledge and skills necessary to ensure the graduate's competitiveness with the requirements of the labor market.

6. The quality of filling information about the disciplines

The composition of educational modules covers all relevant areas of training specialists in the field of information technology. The Contents: of the table "Information about disciplines" of the educational program includes the following information: module name, cycle, type of discipline, name of the discipline and its brief description, number of credits, codes of learning outcomes, and also correspond to the adopted competence model of the graduate.

7. Conclusion on the EP

Based on the above, we can say that the goals and content of the proposed educational program meet the modern qualification requirements for the preparation of masters specializing in education under the educational program "7M01530-Computer Science".

Candidate of Pedagogical Sciences, Associate Professor
Department of «Informatics»
of the South Kazakhstan Pedagogical University
U.Zhanibekov University

Nurmukhambetova G.K.

Expert conclusion

on the educational program
«7M01530- Computer Science»

1. The relevance of the EP

Currently, students in the field of teacher training in natural sciences apply mathematical knowledge and information literacy at all levels of education, in research institutes, state and non-state scientific and educational institutions. Because the effective use of modern software products, technical means and technologies in the professional sphere is a requirement of modernity. The student analyzes and applies information from various sources of information on issues arising in the course of his activities, carries out professional activities in compliance with the rules of information security, applies information and communication technologies in conducting mathematical research.

2. Compliance of EP with formulated objectives, consistent with the mission of the university, the needs of employers and students

The educational program "7M01530 -"Computer science" formulates the concept of the educational program, the goals and objectives of training specialists, requirements for the organization of the educational process and for applicants, the results of training in the OP, and also contains a description of the qualification characteristics of the graduate of the educational program, his key and professional competencies, information about disciplines. The list of academic subjects and their content meet the modern qualification requirements for specialists in the field of information technology and mathematics and computer science.

The requirements for the selection of academic disciplines, formed knowledge, practical skills and professional competencies are fully consistent with the mission of the university "aimed at the formation of new competencies, training of a leader who spreads research thinking and culture", meets the needs of employers and undergraduates.

3. Compliance with the National Framework of Qualifications of the Republic of Kazakhstan

The objectives and Contents: of the EP correspond to level 7 of the National Qualifications Framework of the Republic of Kazakhstan.

4. Reflection in the OP of learning outcomes and competencies based on Dublin descriptors laid down in professional standards / industry framework

The OP is harmonized with the Dublin descriptors, the 2st cycle of the Qualifications Framework for the European Higher Education Area (A Framework for the European Higher Education Area), and also the 7th level of the European Qualifications Framework for Lifelong Learning.

5. Compliance with the classification of training areas with higher education

The educational program corresponds to the direction 7M015 Training of teachers in natural science subjects of the classifier of training areas with higher education.

6. The structure and Contents: of the EP, the application of the modular principle of their construction

In accordance with the credit technology of education in the EP, a modular construction principle is laid. The curriculum includes disciplines of the university component and disciplines of the component of choice. The disciplines of the university component ensure the formation of general and professional competencies. Elective component disciplines broaden and deepen the training of students, contribute to obtaining additional competencies, knowledge and skills necessary to ensure the graduates' competitiveness with the requirements of the labor market.

The composition of educational modules covers all relevant areas of training highly qualified specialists in the field of information technologies that are competitive in the domestic and international labor markets.

7. The presence in the EP of components to prepare for professional activities, developing key competencies, intellectual and academic skills, reflecting the changing requirements of society, including the implementation of the presidential program for mastering three languages: Kazakh, Russian and English.

The Contents: of the EP corresponds to the focus of training, thought out and well-equipped with meaningful Contents: . The included academic disciplines cover the whole range of topical issues and problems and problems according to the profile of training, are fully able to form the necessary specialized knowledge, skills and abilities of information technologies, suggest mastering Kazakh, Russian and English languages.

8. The logical sequence of disciplines and the reflection of the basic requirements in the curricula and training programs

The distribution of disciplines by academic periods is rationally and logically verified. All types of educational activities are provided for the preparation of highly qualified specialists with the skills of research work - theoretical training, pedagogical and research practice, writing and defending a dissertation. The planned volume and time resource for academic disciplines and types of training meet the qualification requirements for the level of graduates.

The structural parts of the educational program are interrelated, continuous, aimed at achieving the planned comprehensive result and are disclosed in depth and in full.

Methodological equipment of the educational program contributes to the successful solution of tasks in key areas of training, education and development of undergraduates.

9. Reflection in the EP of the system of accounting of the academic load of students and teachers in loans, its compliance with the parameters of the credit system of education.

The content of the EP fully complies with the requirements of the credit technology of education, including in terms of accounting for the academic load of teachers and undergraduates in loans. 120 credits are provided.

10. Presence in programs of industrial practice for fixing the theoretical material expressed in the academic load in credits

The educational program provides for the following types of practices: pedagogical practice in the amount of 4 credits, research in the amount of 6 credits.

There are 24 credits for master's research work, including internship and dissertation, 8 credits for the design and defense of a master's thesis.

11. Qualifications obtained as a result of the mastering of EP

Upon mastering the EP, it is planned to assign the graduate the qualification of Master of Pedagogical Sciences according to the educational program "7M01530 Computer Science".

12. Recommendations

In accordance with the above, it seems possible to assert that the goals and content of the EP meet the modern requirements for the preparation of masters specializing in mathematics and computer science.

It is recommended to accept the presented educational program for implementation.

Chairman of the Expert Committee,
Dean of Natural Sciences Pedagogy Higher School of
M.Auezov South Kazakhstan University
