

Statement of attitude towards the use of artificial intelligence

The editorial board of the journal "South Kazakhstan Science Herald" recognizes the potential of generative AI tools to help authors. However, the use of these tools imposes certain obligations on authors to comply with scientific ethics and copyright.

According to the recommendations of the COPE (Committee on Publication Ethics), AI tools do not have legal personality and cannot assume responsibility for the content of an article, the accuracy of data, or compliance with ethical standards.

The authors are solely responsible for all information in the manuscript, including the absence of plagiarism, the accuracy of citations, and the absence of false facts created by AI.
